Highly qualified and versatile Mobile Software Engineer with extensive experience in media, banking, payments, real estate, entertainment, and fashion industries. Android specialist with solid knowledge in Kotlin Multiplatform Mobile (KMM) and Flutter SDK. Proficient in Kotlin, Android Compose UI, and API Integration. Skilled in requirements analysis, agile methodologies, CI/CD pipeline development, and unit and integration testing. Proven ability to lead teams, mentor developers, and collaborate with cross-functional teams to deliver high-quality and scalable mobile applications.

Professional Experience

Dec 2024 to currently working

Senior Mobile Engineer - Banco Daycoval

I work as the main mobile developer responsible for the architecture and complete development of multiplatform applications. I lead the development of SGI Mobile, a Kotlin Multiplatform (KMP) application that shares code between Android and iOS, implementing Clean Architecture with MVI pattern for state management. I architected the entire modular structure of the project, organizing domain, data, and presentation layers, in addition to implementing a unified multiplatform navigation system. I develop both the multiplatform application and the main banking application in native Android, ensuring high code quality, comprehensive unit tests, and continuous integration. I collaborate with cross-functional teams to define technical strategies, integrate new members, and facilitate the adoption of multiplatform technologies.

android ios kotlin multiplatform mobile banking clean architecture mvi

Sept 2022 to Jun 2024

Senior Mobile Engineer - Globant

I worked as an Android developer specialized in streaming applications, developing and maintaining a highly rated media application for mobile devices and Android TV. I implemented robust architecture with Android best practices, focusing on scalable and testable code. I established comprehensive unit and integration testing structure, resulting in significant reduction of production defects. I optimized application performance, improving loading times and stability. As a technical leader, I conducted the development of a multiplatform

payment application using Kotlin Multiplatform (KMP), defining technical strategy, modular architecture, and development patterns. I was responsible for integrating new team members, facilitating KMP technology adoption, and supporting development in both Android and iOS. I implemented CI/CD pipelines and integrated REST/GraphQL APIs, ensuring continuous delivery and high code quality.

android ios kotlin multiplatform mobile payment streaming android tv technical leadership

December 2020 to Sept 2022

Consultant/Specialist (Android) - ThoughtWorks

I worked as a Senior Software Consultant on most projects, delivering high-performance, scalable, and well-tested Android applications, as well as solving architectural bottlenecks with cutting-edge solutions in the mobile ecosystem. I collaborated directly with UI/UX, Backend, and PM teams to provide the best possible solution for our clients. I developed native SDKs for Android and multiplatform, in addition to integrating them into Android applications intended for end users. I integrated REST and GraphQL APIs in three different types of Android projects, using third-party and internal HTTP client solutions.

android jetpack compose consultancy

Feb 2020 to Dec 2020

Software Engineer/Specialist (Android) - Grupo Zap

I joined Grupo Zap to integrate the team responsible for three mobile applications on two platforms, which are marketplaces for displaying property listings. They developed a multiplatform SDK based on Kotlin Native to manage metrics between native applications (Android and iOS) and various analytics providers, such as Firebase, Google Analytics, Facebook Analytics, among others. Subsequently, I was part of a project to start using BDD in mobile applications, creating a multiplatform project using Appium + Cucumber and integrating it into the CI/CD flow of mobile applications. After that, the team returned to native Android development and enhancement with the goal of creating modern Android feature modules and Flutter platform channels, adding these modules/features to existing native applications, enabling seamless cross-platform functionality.

android kotlin multiplatform flutter real estate

Feb 2019 to Feb 2020

Software Engineer/Specialist (Android) - PayGo

I developed from scratch a payment application that communicates with PinPad devices via Bluetooth, using the already developed SDKs. I initiated the development and enhancement of native Android SDKs as the project grew and more developers were hired. I created CI/CD pipelines and SDK versioning systems to achieve large-scale management.

android payment methods

Jul 2018 to Jan 2019

Software Engineer/Specialist (Android) - Vibe Desenvolvimento

I developed and improved features for an Android banking application. Being the only Android developer on the team, I had autonomy to study and implement new technologies, in addition to participating in decisions about new features.
